MARYLAND DEPARTMENT OF GENERAL SERVICES  
OFFICE OF THE SECRETARY

This booklet has been designed by the Department of General Services to be a helpful tool for state workers who use state fleet vehicles in the course of their work.

Since its inception in 1990, the **State of Maryland Automated Fuel Dispensing and Management System** has grown to over 100 refueling sites at convenient locations throughout the state. The system dispenses gasoline, diesel fuel, motor oil and alternative clean burning fuels such as compressed natural gas and E85.

The success of the program is due in large part to the cooperation of each agency and every driver of state vehicles. Your acceptance of, and enthusiasm for, the system has been most gratifying. Where necessary, you have altered your driving patterns and refueling habits, contributing greatly to the efficiency and resultant savings the system provides. We look forward to your continued cooperation.

Please drive safely.

# About the System

As a result of a new partnership and an outstanding example of cooperation between State government and private enterprise, DGS has taken refueling services into the 21st Century, providing state of the art technology and increasing the Statewide network to over 100 refueling sites at the end of fiscal year 2012. Thus far, the State of **Maryland Automated Fuel Dispensing and Management System** has dispensed over 202 million gallons of fuel and has saved the taxpayers of Maryland over 9.1 million dollars to date. In addition, the State has upgraded the fuel management equipment, software and computer system on a “pay as you go” basis for a few pennies of the cost of each gallon of fuel used. When the conversion of the system is complete, every State owned vehicle will be within quick and easy access to a refueling station no matter where in the State the driver is traveling.

The system is environmentally friendly. Included are monitoring devices which test for tank leakage and product quality. All facilities are equipped with state of the art vapor recovery hoses and venting pipes. Compiling reports for vehicle cards, use and maintenance, drivers, and approval of invoices is as easy as a click on the computer screen.

The Department of General Services is pleased to implement the new Automated Fuel Management System to State drivers. The continuing success of the program is important to all of us in the State as we adopt new techniques that move toward making a cleaner environment. We look forward to a more streamlined, paperless process that will guarantee an unqualified success in efficiency and increased savings.

If you have questions and would like to acquire more information, please contact Kathryn Wilson, Department of General Services at (410) 767-0587.

**Date Issued/Revised August, 2012**
